

StoneGate™

Double the speed at half the price?

**That's right,
with StoneGate Multi-Link™
you actually do get more
than you pay for!**

For companies around the world StoneGate Multi-Link™ is the answer to always-on Internet connectivity. It is an alternative to the expensive point-to-point solutions like MPLS. With StoneGate Multi-Link™ you can spread your connectivity bases, always ensure the optimal connections with secure encryption and forget downtime from your ISP.

STONESOFT

Secure Information Flow

When your business needs always-on connection – StoneGate Multi-Link™ is the solution

StoneGate Multi-Link™ is the ideal solution for companies around the globe requiring always-on Internet connectivity.

StoneGate Multi-Link™ allows companies to work with any type of Internet connections including affordable Internet or enterprise-based connections to ensure resilient connectivity clusters.

StoneGate Multi-Link's smart load-sharing functionality ensures high availability, the fastest connection possible and significant savings thanks to reduced monthly costs and maintenance without downtime. StoneGate Multi-Link™ can easily and cost-efficiently add bandwidth as needed.

No need for MPLS any more

StoneGate Multi-Link™ is a good alternative to more expensive point-to-point solutions such as Multiprotocol Label Switching (MPLS). Even in the case where an enterprise has an MPLS solution, there is no guarantee of always on connectivity. Multi-Link™ on the other hand ensures always-on Internet connectivity thanks to patented load-sharing functionality and centralized management.

By adding another affordable layer of ADSL or xDSL connectivity and combining it with StoneGate Multi-Link™, your enterprise is assured of resilient connectivity and high availability. For enterprises with branch offices and a mobile and distributed workforce using VPN connections, StoneGate Multi-Link™ is an ideal solution to ensure that data flows as it should, speedily and securely.

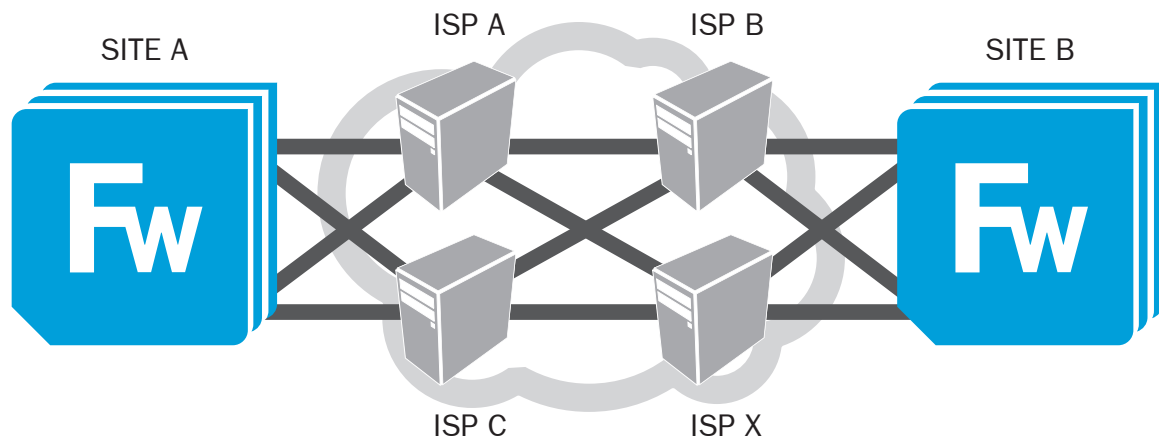

With StoneGate Multi-Link™ you receive:

- Optimal and always-on connectivity
- Built-in reliability
- High availability
- More bandwidth
- Secure encryption
- Cost-efficient alternative to MPLS

StoneGate Multi-Link™ – an unique part of the StoneGate solution

StoneGate Multi-Link™ is a part of StoneGate – the unified centrally managed system that combines deep network security and assured end to end availability. StoneGate utilizes a combination of layered architecture and central monitoring to create security control and ensure fast response times to security breaches and network disturbances.

Its load balancing feature for gateway and web server increases performance and eliminates downtime.

For companies with branch offices and a mobile and distributed workforce using VPN connections, StoneGate Multi-Link™ is an ideal solution to ensure that data flows as it should, speedily and reliably.

When reliable and always on Internet connectivity is a must, choose StoneGate Multi-Link™.

With StoneGate Multi-Link™ you can ensure the fastest, most resilient route to the Internet and gain significant savings.
